Hiring Team

OEC

OEC's focus on streamlining workflows and improving the parts supply chain in the automotive repair industry aligns well with my experience leading product strategy and execution for complex technology platforms. At Emerson Electric, I defined scalable MVP strategies and balanced customer customization with platform scalability, which improved analytics platform adoption and reduced development overhead. This experience will help me prioritize features and manage backlogs effectively to deliver high-impact, customer-centric solutions for OEC's Advanced Repair Technologies portfolio.

I'm comfortable working cross-functionally with engineering, design, and business teams, having coordinated software, firmware, and hardware initiatives at Chamberlain Group to align product delivery and improve sprint execution. My hands-on approach to Agile ceremonies and backlog grooming supports continuous improvement and ensures timely, quality releases. Additionally, I've led customer-driven roadmap discussions and collaborated closely with stakeholders to translate market insights into clear problem statements and actionable product strategies.

OEC's commitment to innovation and customer value resonates with my work building AI-powered analytics agents that automated reporting and decision support, reducing manual effort by 80%. While AI is a tool rather than a buzzword, I see practical opportunities to leverage automation and data-driven insights to enhance product adoption and operational efficiency in your solutions.

I appreciate OEC's remote-first culture and emphasis on collaboration across time zones, which fits my adaptable work style and experience managing multiple initiatives in fast-paced environments. I look forward to contributing to OEC's mission by delivering scalable, intuitive products that meet real customer needs and drive measurable results in the automotive parts and repair ecosystem.

Sincerely,
Ricardo Lugo
