Hiring Team
Sensi.AI

Sensi.AI's mission to transform home care through agentic AI resonates with my experience building AI-powered analytics and automation systems that improve operational visibility and decision-making. At LITET, I developed AI workflows integrating sales, advertising, and inventory data to automate reporting and optimize performance, reducing manual effort by 80%. This hands-on work with AI-driven solutions aligns with your focus on innovative technology to enhance care quality for older adults.

Leading end-to-end product development is familiar territory for me. I've managed complex roadmaps and coordinated cross-functional teams to deliver scalable SaaS products, such as multi-warehouse inventory forecasting platforms that improved inventory rotation fourfold. My approach balances technical feasibility with user needs and business goals, ensuring products deliver measurable value—key to driving adoption, retention, and revenue as outlined in your role.

I'm comfortable collaborating across R&D, marketing, operations, and customer success to align priorities and refine product features based on market research and user feedback. My experience at Emerson Electric and Chamberlain Group involved shaping analytics and API roadmaps through stakeholder engagement and data-driven insights, which helped increase platform adoption and customer satisfaction.

Sensi's emphasis on user-centric innovation and continuous improvement fits well with my commitment to understanding user challenges and iterating products accordingly. I'm eager to contribute my blend of AI expertise, product leadership, and operational insight to help shape Sensi's AI-powered applications and make a tangible impact on the lives of those receiving in-home care.

Sincerely,
Ricardo Lugo
