Hiring Team

Attentive

Attentive's focus on delivering personalized, AI-driven marketing experiences aligns closely with my background in building operational systems that simplify complexity and drive measurable outcomes. At LITET, I developed internal tooling and multi-warehouse inventory forecasting platforms that integrated fragmented data sources into unified, actionable insights—much like how Attentive structures product catalog data to power intelligent recommendations. This experience has honed my ability to translate ambiguous operational challenges into clear, prioritized roadmaps, a skill I see as essential for leading your product recommendations strategy.

I'm comfortable partnering with data science teams to define algorithmic approaches and have hands-on experience building data pipelines and ETL workflows that improve data quality and scalability, similar to the needs of your AI-powered personalization engine. My work at Emerson Electric, where I influenced analytics and API roadmap priorities and balanced customer customization with platform scalability, has prepared me to make tradeoffs and decisions autonomously in complex environments.

Moreover, I've managed cross-functional teams and coordinated product initiatives across software, firmware, and hardware, which equips me to collaborate effectively with engineering, design, and go-to-market teams at Attentive. I appreciate your emphasis on customer success and internal evangelism, and I'm eager to help sales and marketing teams confidently position product recommendations by crafting clear narratives around their value and effectiveness.

Joining Attentive feels like a natural next step where I can leverage my operational systems expertise and product management experience to advance your mission of creating bespoke shopping experiences that connect brands and customers in meaningful ways.

Sincerely,
Ricardo Lugo
