Hiring Team
Cresta

Cresta's mission to transform customer experience through AI aligns closely with my background in building AI-powered analytics and automation systems. At LITET, I developed AI workflows that automated complex sales and operational reporting, significantly reducing manual effort and enabling faster, data-driven decisions. This experience has given me a strong technical fluency and a practical understanding of integrating AI agents into real-world workflows, which fits well with Cresta's platform combining AI agents and human augmentation.

I'm particularly drawn to the Platform Product Manager role because it sits at the intersection of technical systems, security, and customer operations—areas I've navigated through coordinating multi-channel inventory visibility and forecasting platforms that required integrating diverse data sources and ensuring reliable, scalable operations. My work collaborating with engineering and customer-facing teams to prioritize features and drive execution has sharpened my ability to bring structure to ambiguous problems and make clear product decisions, even in complex environments.

While I haven't specialized in IAM, I'm comfortable diving into technical details, discussing APIs, and partnering closely with engineering and security teams to deliver practical, enterprise-ready solutions. My experience leading roadmap strategy and balancing customer needs with platform scalability at Emerson Electric has prepared me to define and prioritize capabilities that support both AI-driven and human workflows, just as Cresta requires.

Joining Cresta offers the chance to contribute to a platform that's redefining how businesses engage with customers through AI. I'm eager to apply my systems thinking, technical fluency, and operational experience to help evolve foundational platform capabilities that enable secure, scalable, and seamless AI-powered customer experiences.

Sincerely,
Ricardo Lugo
