Hiring Team
Fixify

Fixify's approach to combining AI with human IT analysts to streamline IT operations resonates strongly with my experience building AI-powered analytics and automation systems. At LITET, I developed AI workflows that automated complex sales reporting and inventory forecasting across multiple fulfillment channels, reducing manual effort by 80% and improving operational visibility. This hands-on work taught me how to translate customer pain points into clear, actionable specs that engineering and data science teams can execute without ambiguity—exactly the kind of ownership and cross-team alignment Fixify values.

I'm drawn to the dual mandate of this role: driving specific roadmap projects while also owning the connective tissue that keeps product delivery predictable and customer-focused. My background includes managing end-to-end product roadmaps and running feedback loops across sales, customer success, and operations teams to ensure priorities reflect real user needs. I'm comfortable pulling my own data using tools like Hex and applying AI tools such as ChatGPT to enhance discovery and prioritization, always anchoring decisions in what truly solves customer problems rather than what's easiest to build.

Fixify's AI-native platform presents a unique opportunity to work at the intersection of AI, automation, and IT operations—areas where I've built scalable solutions that improve efficiency and customer outcomes. I appreciate that AI is core to your product, not just an add-on, and I'm eager to contribute my experience in product analytics, AI workflows, and cross-functional collaboration to help Fixify grow while maintaining a sharp focus on customer value and execution discipline.

Sincerely,
Ricardo Lugo
