Hiring Team

Quora

Quora's mission to grow the world's collective intelligence resonates with my experience building scalable, data-driven products that deliver clear value to users. Leading AI-powered content initiatives at Quora fits naturally with my background in defining product strategy and driving execution through cross-functional collaboration and experimentation.

At Emerson Electric, I balanced complex roadmap tradeoffs to deliver scalable telemetry analytics platforms, prioritizing features that met 80% of customer needs while reducing custom development overhead. This experience aligns with Quora's need to manage ambiguity and prioritize high-impact AI content features responsibly. Similarly, my work at LITET developing multi-warehouse inventory forecasting and KPI dashboards sharpened my ability to translate quantitative data into actionable insights, a skill I would bring to defining objectives, metrics, and guardrails for AI-driven content quality and engagement.

I'm comfortable working closely with engineering, design, data science, and operations teams to iterate quickly and optimize product performance. My experience increasing API adoption by 35% through simplifying integrations and improving onboarding also reflects my ability to drive adoption and scale complex technical products. I appreciate Quora's culture of transparency and experimentation, which mirrors how I've approached product development—testing hypotheses, learning from data, and adjusting course to maximize impact.

Joining Quora means contributing to a platform that shapes how millions access and share knowledge, while advancing AI capabilities in a responsible and user-focused way. I'm eager to apply my technical product management experience and data-driven mindset to help Quora deliver high-quality AI-powered content experiences that engage and empower users worldwide.

Sincerely,
Ricardo Lugo
