Hiring Team
Robots & Pencils

At Robots & Pencils, the challenge of moving AI agents from demos to scalable, secure, and compliant production systems resonates with my experience building AI-powered analytics and automation tools. At LITET, I developed AI workflows that automated complex sales and inventory reporting across multiple marketplaces, reducing manual effort by 80% and enabling daily KPI monitoring. This hands-on work with AI integrations and operational systems aligns with your focus on agent orchestration and multi-step workflows within the AWS ecosystem.

I'm drawn to this role because it combines deep generative AI fluency with end-to-end product ownership—something I've practiced by translating complex business problems into structured, outcome-driven solutions. For example, at Emerson Electric, I influenced analytics and API roadmap strategies by balancing customer needs with scalable platform development, improving adoption and executive alignment. This experience equips me to manage competing priorities, define clear success metrics, and drive product decisions that deliver measurable business value.

Your emphasis on testing assumptions early and designing experiments to validate agentic AI solutions fits well with my approach to prototyping and validation. I've built Python-based forecasting and replenishment systems that improved inventory rotation fourfold, demonstrating how thoughtful design and iteration can create sustainable operational improvements. Partnering closely with engineering to manage context, guardrails, and production readiness is a natural extension of my cross-functional collaboration experience.

Finally, I appreciate Robots & Pencils' commitment to combining consulting variety with product depth. I'm comfortable navigating ambiguity and rapid AI evolution, and I'm eager to contribute to building repeatable AI deployment patterns that enterprise clients can trust and scale. This role offers the opportunity to apply my technical fluency and product leadership to real-world AI challenges, helping clients transform how they operate.

Sincerely,
Ricardo Lugo
