Hiring Team
Samsara

At Samsara, the mission to transform physical operations through connected IoT data aligns closely with my experience building AI-powered analytics and operational platforms that improve efficiency and visibility across complex environments. Leading the development of AI-driven reporting agents and multi-warehouse inventory forecasting systems has given me a strong foundation in creating scalable, data-informed products that serve multiple stakeholders and downstream users—skills directly relevant to owning and evolving the In-Vehicle Experience platform.

I'm particularly drawn to the challenge of turning in-cab cameras from surveillance tools into trusted companions for drivers. My background working at the intersection of software, hardware, and analytics—especially coordinating cross-functional teams to deliver integrated IoT solutions—has prepared me to navigate the technical constraints of firmware and embedded systems while prioritizing features that genuinely improve user experience. I understand the importance of continuous customer research and have led initiatives involving direct user engagement to translate insights into actionable product strategies.

Collaborating with AI and ML teams to embed intelligent features is a natural extension of my work automating decision support and operational monitoring with OpenAI APIs. I appreciate Samsara's focus on technology that respects and supports frontline workers, not just monitors them, and I share the commitment to building products that help people feel informed, trusted, and connected.

I'm motivated by the opportunity to contribute to a platform that impacts industries critical to the global economy and to work in an environment that values experimentation, candid feedback, and long-term thinking. Samsara's culture of ownership and growth resonates with how I approach product leadership—balancing technical depth, customer empathy, and platform thinking to deliver meaningful outcomes.

Sincerely,
Ricardo Lugo
