Hiring Team
Scout Global

Scout Global's focus on building scalable AI orchestration infrastructure aligns closely with my experience developing AI-powered automation and analytics platforms. At LITET, I created AI workflows integrating sales, advertising, and inventory data to automate complex reporting and decision-making processes, reducing manual effort by 80%. This hands-on work with AI agents and operational automation has given me practical insight into the challenges of scaling autonomous systems and delivering reliable, efficient workflows.

I've also led product strategy and roadmap prioritization at Emerson Electric, balancing enterprise customer needs with scalable platform development. By conducting customer discovery and synthesizing diverse requirements into reusable capabilities, I improved platform adoption while reducing custom development overhead. This experience mirrors the need at Scout Global to translate technical platform capabilities into customer value and to define success metrics around reliability, scalability, and adoption.

Working closely with engineering and research teams has been a consistent part of my roles, enabling me to bridge technical and business perspectives effectively. I'm comfortable navigating fast-paced, ambiguous environments and driving product discovery and execution with a clear focus on measurable outcomes.

Scout Global's mission to advance autonomous AI ecosystems through robust orchestration platforms is a natural next step for me. I'm eager to contribute my background in AI workflows, operational automation, and customer-driven product strategy to help build enterprise-grade orchestration systems that empower developers and organizations to deploy scalable, secure AI agents.

Sincerely,
Ricardo Lugo
