Hiring Team
xCures

I'm drawn to xCures because of your mission to make critical patient data accessible and trustworthy when it matters most. Your AI-powered platform that aggregates and distills health data aligns with my experience building data-centric, reliable systems that support complex operations and decision-making. At LITET, I developed AI-driven analytics and forecasting tools that automated reporting and improved inventory visibility across multiple fulfillment environments. This work required balancing technical complexity with user trust and operational reliability—qualities I see reflected in your clinical-first product approach.

I'm comfortable working closely with engineering, data science, and stakeholders to translate ambiguous needs into clear, actionable product plans. For example, I've led roadmap prioritization and tradeoff decisions that balanced short-term execution with long-term scalability, similar to what you describe for this role. My background includes building data pipelines, integrating multiple data sources, and shipping AI-enabled features that reduce manual effort and improve decision speed—skills that would help drive your AI workflows and analytics features.

I also understand the importance of regulatory compliance and security in healthcare-adjacent environments, having managed complex operational workflows and data integrations that require accuracy and trust. I'm eager to contribute to a product portfolio that supports clinical users with validated, traceable information and to collaborate closely with your team to ensure what we ship meets the highest standards of quality and reliability.

Joining xCures feels like a natural next step where I can apply my technical product management experience to help solve real healthcare challenges through thoughtful AI and data-driven solutions.

Sincerely,
Ricardo Lugo
